

Policy Code: 5140 Relationship with Schools and Land Use Councils

The need for new schools is often driven by new construction which occurs in the school district. The approval process for new construction projects typically is initiated at other levels of local government such as at the county or city levels. The Board will provide elected representatives and staff members, as needed, to participate in intergovernmental councils or task forces to develop plans for approving developments, gauging the impact of the developments on the school district, locating new school facilities within the school district, collaborating in the construction of public facilities and/or providing them in a timely manner.
